Tell me why?

This book is interesting. There are hundreds of surprising questions and fascinating answers .It includes six subjects, namely history, our world, the natural world, the human body, general knowledge and science space.

My most interested question in the book is: why are some insects brightly colored?

They are brightly colored because they want to protect themselves from their enemies. Some insects, such as wasps and ants, have powerful stings or are able to shower their attackers with poisonous fluid. The hoverfly does have powerful stings or poisonous fluid, but its coloring is so like that of a wasp or bee that enemies are very scared. Moreover, the bright coloring on some insects warns its enemies that it may be poisonous. In this way, their enemies will not get close to the insects and attack them. Thirdly, some insects such as stick insects use camouflage. They look like leaves and twigs among which they feed. Then, their enemies won't discover them. Their own coloring is used to protect themselves.

Why do I choose this question? I am interested in insects. I think the body structure of insects is wonderful. They can use the brightly coloring to make their enemies feel scared. Also, they can use the camouflage to hide themselves. Then, the other insects cannot discover them. I envy them who can be born with such amazing coloring. It is wonderful and beautiful.

After I read this book, I have gained a lot of knowledge. This book has answered a lot of surprising and interesting questions. I know more about in science and space, and history. It can provide testing quiz questions, settle arguments and assist with school projects. It is useful for my studies. Also, this book is not too difficult. The content is easy to understand. My English is also improved. It is an intriguing reference book for all people.
